EDUCATION

Pamantasan ng Lungsod ng Valenzuela

Bachelor of Science in Information Technology | 2023–2027

Honors: Dean's Lister (4 Consecutive Semesters)

PROJECTS

AGOS – AI-Guided Overflow System | *FastAPI, React, PostgreSQL, Docker, Raspberry Pi*

- Automated real-time waterway blockage alerts via Raspberry Pi, fusing YOLOv8, ultrasonic sensors, and weather APIs.
- Developed FastAPI service with WebSocket communication for low-latency sensor and camera data streaming.
- Designed PostgreSQL schemas with Alembic migrations to support scalable multi-node sensor and media ingestion.
- Engineered a Responder PWA with Web Push and an Android SMS gateway, utilizing queues to guarantee alert delivery.

PLV CEIT Library | *Laravel, Livewire, PostgreSQL*

- Automated QR-based library check-ins using Laravel, eliminating manual logbooks and minimizing student wait times.
- Streamlined dashboard monitoring via Livewire, achieving real-time scan updates without full-page server refreshes.
- Secured concurrent QR scans by optimizing PostgreSQL transactions, preventing race conditions during peak hours.

Feedback Management System | *Laravel, React, Inertia.js, PostgreSQL*

- Developed a modular survey engine with QR access and Spatie RBAC via Filament Shield, enabling secure data collection.
- Implemented Laravel Queue-based async PDF/Excel exports, preventing server timeouts on large datasets.
- Secured system data by utilizing custom Monolog processors to automate PII log scrubbing
- Built custom analytics dashboards to visualize aggregated survey metrics and monitor real-time data collection.

Task-Buddy | *FastAPI, React, Redis, Celery, PostgreSQL, Docker*

- Prevented session hijacking by implementing JWT authentication with Redis token invalidation and Argon2 hashing.
- Guaranteed alert delivery by architecting a Celery and Redis async pipeline with WebPush and SMTP fallbacks.
- Standardized deployments and mitigated vulnerabilities by containerizing services with Docker Compose and CI/CD DAST

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript, Java, C#
- **Frameworks:** FastAPI, Laravel, React, Node.js, .NET, Livewire, Tailwind CSS
- **Databases:** PostgreSQL, MySQL, MongoDB, SQL Server
- **Tools:** Docker, Git, GitHub, Github Actions, Railway, Vercel, Render, Postman

AWARDS & CERTIFICATIONS

- **ITlympics 2026 – Silver Medal** | Capture the Flag | *Pamantasan ng Lungsod ng Valenzuela* | March 2026
- **14th National IT Skills Olympics – Representative** | Cybersecurity Quiz Bee | *University of Makati* | November 2025
- **Google Cybersecurity Professional Certificate** | *Google* | January 2026
- **Mastering REST APIs with FastAPI** | *Packt* | May 2026
- **An Introduction to Programming the Internet of Things (IoT)** | *UC Irvine* | May 2026
